- Androscoggin Valley Hospital, NH
- WVU Medicine, WV
- Knox Community Hospital, OH
- Women & Infants Hospital, RI
- WakeMed, NC
- Intermountain Healthcare, UT
- New York Presbyterian, NY

### The Experience

I believe that this course delivered on everything that it said it would. I feel so much more prepared in starting a program on our LRDP unit. The information and exercises provided are easy to follow and perfect to hand out to patients.

- Physical Therapist, The Guthrie Clinic, NY

Enhanced Recovery After Delivery™

I love this course and this area of practice for OT / PT. I strongly believe that we will be an integral part of the postpartum process in acute care and the first 6 weeks postpartum once we start implementing this program throughout the U.S. The value of this program to mothers, children, families, and society is unmeasurable. Mothers need to be taught how to thrive; barely surviving is not good enough.

- Occupational Therapist, St. Clair Health, PA

I found out that the vision I had has been adopted within the hospital system where I worked. They have implemented the acute postpartum C-section protocol including an automatic PT referral to eval and treat POD 1. They are in the process of hiring an OT and adding automatic OT orders to evaluate and treat POD 1 as well. I'm grateful to the authors of the ERAD program and grateful for all of you who work together toward the collective mission to improve maternal health outcomes.

- Physical Therapist, WakeMed, NC
